

# Water Wells

The City of Gulfport maintains 26 water wells, 11 elevated water tanks, and 5 ground level water storage tanks. The wells produce and transport approximately 10 million gallons of water per day to meet the needs of our citizens and businesses. Additionally, the city's storage capacity is 5.148 million gallons of water in tanks located throughout the city. This capability is vital in order to maintain system water pressure and fire fighting capability.
